Abstract (en)

[origin: WO2011086044A1] The invention describes a method for optimizing the relative position of at least two printing-unit cylinders (21, 37, 40), in which method the relative position of the at least two printing-unit cylinders is set on the basis of measured values. The measured values comprise first values with respect to the size of the surface area (9), with which at least one of the printing-unit cylinders makes contact with a further body (5, 25, 40).
