Abstract (en)
[origin: WO2011085706A1] The invention relates to a device for controlling a fluid flow and comprising a housing and two valve elements arranged inside an inner chamber of the housing. The valve elements are movably arranged relative to the housing and are connected to an actuating device. The first valve element is designed to perform a first motion process, and the second valve element is designed to perform a second motion process. The first motion process and the second motion process can be varied by the actuating device.
