Abstract (en)

[origin: WO2011086158A1] The invention relates to a system (10) for removing banknotes from at least one banknote transporting unit (12) and/or for feeding banknotes to the banknote transporting unit (12). The system (10) has a docking station (14) comprising a receiving area (16) secured by a safe for receiving the banknote transporting unit (12) and a control unit (28) for controlling the docking station (14). The docking station (14) comprises a first transmitting and/or receiving unit (24) for transmitting and/or receiving data, said first transmitting and/or receiving unit (24) being connected to the control unit (28) via a data transmitting element (30). The banknote transporting unit (12) comprises a storage element (18) and a second transmitting and/or receiving unit (22) for transmitting and/or receiving data. In a first operating state, the banknote transporting unit (12) is received in the receiving area (16) of the docking station (14) and a data transmission connection between the first and second transmitting and/or receiving unit (22, 24) is established. In a second operating state, the banknote transporting unit (12) is arranged outside the receiving area (16) of the docking station (14) so that there is no data transmission connection between the two transmitting and/or receiving units (22, 24).
