Abstract (en)

[origin: EP2525001A1] The present invention relates to a tap (1) adapted to be inserted so as to be able to slide in a through hole (21) formed on a support surface (20), said tap (1) being movable between a position wherein it is extracted with respect to said surface (20) and a position wherein it is partially retracted below said surface (20) and comprising a first elongated hollow tubular portion (2) adapted to be slidably inserted into said through hole (21), and a second elongated hollow tubular portion (3) provided on top of said first portion (2) arranged substantially perpendicular to it, interconnected each other by a connection joint (23), and an actuating means (5) for the water outlet from an opening (4) provided on said second elongated hollow portion (3). The actuating means (5) is provided integral with said tap (1) and connected to a mixing cartridge valve (6) arranged inside said connection joint (23).
