Abstract (en)

The invention relates to a pneumatic flush control for a flush mechanism of a toilet, wherein the flush mechanism comprises an actuating member for starting the flush action, the pneumatic flush control comprising: - a master unit having a housing with a push button slidably arranged in the housing and a first bellows arranged in the housing between the push button and a wall of the housing; - a slave unit having a housing with a control member for actuating the actuating member of the flush mechanism, which control member is slidably arranged in the housing and a second bellows arranged in the housing between the control member and a wall of the housing; and - a fluid line arranged between the first and second bellows for providing a fluid connection between the first and second bellows; wherein the second bellows is provided with a pressure equalization opening for equalizing the pressure in the second bellows to the ambient pressure, wherein the pressure equalization opening comprises a restriction.
