Abstract (en)  
[origin: CN102787771A] A door hinge(1) includes two hinge parts(1a,1b) that are connected to each other in articulating fashion. One of the hinge parts(1a,1b) has a base plate(2a) for attachment to a door frame or door leaf and at least one insert(3a) that is adjustable in two directions (x, y, z) relative to the base plate(2a). An intermediate piece(6,6) is situated between the insert(3a) and the base plate(2a) that is movable relative to the base plate along a first linear guide in a first direction (x). The insert is movable relative to the intermediate piece(6,6) along a second linear guide in a second direction (z). A fixing means for providing a clamping locking action extends through a front section of the base plate(2a), the intermediate piece(6,6) and the insert(3a).
