Abstract (en)
[origin: EP2525034A2] The device (50) has a lower guide rail (51) for guiding a sliding door (100), during a horizontal sliding operation. An upper guide rail (52) i.e. running rail, guides the sliding door during the sliding operation, where the sliding door is pivoted from a vertical position into a position deviating from the vertical position. A lifting device (1) vertically lifts the sliding door, and is formed at one of the upper and lower guide rails, where an actuation of the lifting device enables complete lifting of the sliding door from the lower guide rail so as to pivot the sliding door.
