Abstract (en)

[origin: EP2525039A2] A window pane frame combination 1 comprises two conventional double glazed insulation window panes 9. These window panes are retained by a frame 17 which is formed into one whole in that fold formed steel profiles are welded together. Part of the profiles is present in between the window panes, which part forms an air chamber 19 which functions as a spacer. The air chamber comprises two side walls 23 facing the window panes and to which the insulation window panes 9 are fixed by means of a bonding agent 25. The frame with the insulation window panes thus constitutes a constructive whole. By bonding the window panes to a frame manufactured as one whole, a rigid self-supporting construction is obtained which can furthermore be manufactured in a simple and cost-effective manner.
