Abstract (en)  
[origin: EP2525171A1] A refrigerator (10) capable of keeping the freshness of stored items at a high level irrespective of the storage state of the stored items in the refrigerator (10) and reducing power consumption. The refrigerator (10) includes: a refrigerator main body (11) in which a storage compartment (12) is formed; a cooling device (35) which cools the storage compartment (12); a stored item estimating unit (22) which estimates the total amount or the positions of the stored items (33) in the storage compartment (12); and a control unit (23) which controls the cooling of the storage compartment (12) by the cooling device (35), according to the result of the estimation by the stored item estimating unit (22).
