Abstract (en)
[origin: EP2525181A1] A heat transfer pipe for a heat exchanger including high threads 22a and low threads 22b that are lower than the high threads 22a. The high threads 22a and the low threads 22b are provided at respective prescribed heights in a helical manner in a pipe axial direction on an inner surface of a pipe 20, the high threads 22a are formed with 11 to 19 threads, the low threads 22b are formed with 3 to 6 threads between each pair of the high threads 22a, the high threads 22a before expansion of the pipe each have a trapezoidal shape in cross-section so that a crest before the expansion of the pipe is flat, and a ratio W1/D of a tip width W1 of the crest portion after the expansion of the pipe to an outer diameter D of the heat transfer pipe 20 is 0.011 to 0.040. Further, the high threads 22a before the expansion of the pipe are higher by 0.04 mm or more than the low threads 22b.
