Abstract (en)

[origin: EP2525463A2] A method for reducing effects of a demand/response event in a power distribution network can include identifying a load profile in the power distribution network, in response to detecting a peak (311, 313) in the load profile, decreasing voltage in the power distribution network and in response to a detecting a trough (312) in the load profile, increasing the voltage in the power distribution network.
