Abstract (en)

[origin: WO2011085829A1] The invention relates to a method for producing a one-piece rotationally symmetrical drive part, in particular a starter ring, comprising an outer-side casing part (3), which is adjoined by an angled flange (4) that has a different thickness than said casing part and is aligned with respect to the central axis, wherein said method is designed such that the flange (4) is derived by forming of a circumferential section of an annular blank (1).
