Abstract (en)  
[origin: WO2011088816A1] The invention relates to a sewing machine, comprising a presser foot (2), which is pivotably supported about a horizontally oriented axis (1) and which interacts with an underneath transport device arranged on a resting area (3) for a material to be sewn, said underneath transport device having two feed dogs (4, 5) movably supported relative to each other for continuously transporting the material in an advancing direction. According to the invention, both feed dogs (4, 5) extend horizontally as viewed in the advancing direction, both in an area before and in an area after the axis (1) of the presser foot (2).
