Abstract (en)
[origin: WO2011088485A1] The invention relates to a separating element for traffic surfaces, which is preferably made of concrete, having at least one connecting element (5, 6) on each opposite end face (4), by means of which connecting element the separating element can be connected to an adjacent separating element (1, 20). At least one projection (41, 43) is arranged on one end face (4) and at least one recess (42, 44) is arranged on the other end face, wherein a projection (41, 43) is inserted into a recess (42, 44) of an adjacent separating element (1, 20) in order to transmit forces acting in the plane of the end face (4) from one separating element (1, 20) to the adjacent separating element (1, 20).
