Abstract (en)

[origin: WO2011089149A1] The invention relates to a ceiling formwork beam (10), preferably made of steel, at least slightly curved in the direction of the concrete to be filled in and/or comprising openings (14), the size and/or shape and/or alignment and/or distribution thereof changing over the length of the beam (10), and/or the beam (10) being designed with respect to the dimensions thereof over the length, such that the beam is less weakened in a center area than in the end areas. A formwork element, in particular a panel, comprises at least one such beam.
