Abstract (en)

[origin: WO2011089358A1] The invention relates to a theft-prevention unit (10; 50) for an item, including a first portion (12) comprising a spike (16) intended for passing through the item or a packaging containing the item and a second portion (30; 52) which is provided with an opening (32b; 54b) for inserting the spike and also includes a locking means to prevent the retraction of the spike after the insertion thereof, characterised in that the two portions are assembled together and maintained in assembled position according to two possible assembly modes: in a first so-called prevention mode, the spike of the first portion is inserted in the opening of the second portion and the locking means is activated such that a user cannot separate the portions without using a tool; in a second so-called provisional assembly mode, the two portions are mutually attached by a provisional attachment means, said means being such that a user can separate the two portions from one another without using a tool.
