Abstract (en)
[origin: WO2011089035A1] The invention relates to an electrical contact element having a primary axis (2). The primary axis (2) pierces a polygonal base surface (1, 1a, 1b) of the contact element. A contact bushing (3, 3a) is arranged around the primary axis (2). An orifice of the contact bushing (3, 3a) opens into a top surface (4) which is arranged on a side of the contact element lying opposite to the base surface (1, 1a, 1b). The top surface (4) bulges spherically over the base surface (1, 1a, 1b) and transitions continually into a lateral face (5) connecting the base surface (1, 1a, 1b) and top surface (4).
