Abstract (en)
[origin: EP2526824A1] The pull-out guide device comprises a guide rail (17), which is connected with the inner side of a cover (15) of a cabinet body (7) directly or by a cabinet slide (16), from which the guide rail is pulled. A pull-out rail (18) is provided, which is pulled out against the guide rail in a pulling direction (4) and is pushed against the pulling direction. The pull-out of the pull-out rail from the guide rail is limited by a stop unit held at the pull-out rail. A pivot axis is provided, which slides against the pull-out rail, where a stop section is adjustable between multiple locking positions.
