Abstract (en)

[origin: EP2527114A1] The press has steel press belts continuously rotated in press upper and lower parts. A press framework comprises press frames (7) or frame metal casting parts, that are arranged in series along a press longitudinal direction. A press cylinder (10) is operated on an upper press plate or a lower press plate and supported on the press frames. The frames and the press cylinder are connected to a mechanically, electrically and hydraulically preassembled frame unit (24), which is transported in a standard shipping container (25) according to ISO668 by a lorry, rail, ship and aircraft. The shipping container is 20-feet, 40-feet or 45-feet standard shipping container. The upper and lower press plates are designed as heating plates. An independent claim is also included for a method for assembling and transporting a continuous press.
