Abstract (en)

The invention relates to an articles treatment apparatus having a heat pump system (4), the heat pump system having a refrigerant loop (6) comprising: a first heat exchanger (10) for heating a refrigerant, a second heat exchanger (12) for cooling the refrigerant, a refrigerant expansion device (16) arranged in the refrigerant loop (6) between the second heat exchanger (12) and the first heat exchanger (10), and a compressor (14) arranged in the refrigerant loop (6) between the first heat exchanger (10) and the second heat exchanger (12). According to the invention a refrigerant release device (36, 40, 46, 51, 54) is provided in fluid connection to a high pressure branch of the refrigerant loop (6) and adapted to release refrigerant from the refrigerant loop (6) through an outlet of the release device.
