Abstract (en)

[origin: EP2527583A1] The device (5) has a mounting unit for mounting a movable element (7) slidingly with respect to a support (6). A second mounting unit mounts a retractable abutment (9) with respect to the movable element between an active blocking position and an inactive blocking position. A locking unit for locking the abutment is constituted by the support, which occupies a locking state of the abutment in the active blocking position and a release state of the abutment in the inactive blocking position. Independent claims are also included for the following: (1) an apron (2) a concealment system.
