Abstract (en)

[origin: CA2781974A1] The stand, which is foldable, with a box comprises a supporting wall (6), two side walls (16, 17), the box being articulated between a folded state and an unfolded and open functional state ready to accept the item. The supporting wall (6) extends between the side walls (16, 17). Flaps (27) keep the box in its unfolded and open state and staying means (16, 17, 27, 6) form, with the supporting wall (6), means of transferring force. Each side wall (16, 17) is a thick wall with at least one two-sided (14, 28) dihedral angle extending from a hinging edge (24) and which can be folded on itself along the edge (24) and along another fold line (19) secant with this edge (24). In the unfolded state, the edges are rigid and form part of said staying means.
