Abstract (en)
[origin: WO2011094026A1] An advanced standing seam roof panel bracket that provides for securing apparatus to a standing seam roof panel is disclosed. The device includes a Pressure Clamping Device that provides the means for removeably securing roofing equipment to the standing seam of the roof panel; and a Plank Support System that provides the means, in cooperation with the Pressure Clamping Device, for removeably securing and retaining a support platform that is capable of supporting a worker, tools, or other materials. In addition, this tool provides an advanced means and method for securely and removeably attaching onto a standing seam of a roof panel any safety equipment such as a lifeline or guard rails, roof installation components such as solar panels and sky lights, roofing installation tooling and scaffolding, roofing repair tooling, or any other equipment that is desired to be removeably secured to the standing seam of a roof panel.
