Abstract (en)

[origin: WO2011092573A1] A driving apparatus (70) for driving an operative unit (24) of a packaging machine comprises an electric motor (71) including a rotor (72). The driving apparatus (70) also comprises an articulated quadrilateral (75) interposed between and connecting the rotor (72) and the operative unit (24) in order to transform a rotational motion of the rotor (72) into an alternate motion of the operative unit (24), thus rendering the driving apparatus (70) safer and more reliable.
