Abstract (en)

[origin: WO2012038204A1] The invention relate to a lighting module (1) for a light (12), in particular an examination light, comprising at least one semiconductor light source (2a, 2b), in particular a light-emitting diode, and at least one common optical system (3) connected downstream of the at least one semiconductor light source (2a, 2b), wherein the lighting module (1) is integrated into the light (12) such that same can be replaced. The light (12) comprises a lighting module (1), wherein the lighting module can be replaced as a unit. The method is used for mounting a lighting module (1) on a light (12) according to claim 12, wherein the method comprises at least the following steps: pushing the lighting module (1) through an opening in the transparent covering (16); fastening the handle (19) to the transparent covering (16) such that the handle (19) presses on the contact face (9) of the lighting module (1) and, moreover, such that the heat sink (10) of the lighting module presses against the body (13) of the light (12).
