Abstract (en)

[origin: WO2011092121A1] The invention relates to an optical device (10) for a motor vehicle, in particular a signaling and/or lighting device, said device comprising: at least one surface light source (1), at least one lens (11) which, in particular, is distant from the surface light source, and which is arranged at least partially along the path of light (R) emitted by the surface light source so as to produce an image of an object area of the surface light source.
