Abstract (en)

[origin: WO2011104592A1] The object of the present invention is a method for managing the heating temperature of a flat water heater (1) consisting of at least two storage tanks (2.M, 2.V) connected in series with one another. Said method provides for the water in the upstream tank (2.M) to be maintained at a storage temperature (TM) higher than a predetermined over-temperature (ATacc) relative to the storage temperature (Tacc) of the water contained in the downstream tank (2.V).
