Abstract (en)
[origin: WO2011092076A1] The present invention relates to a heat exchanger (1) between a first fluid (HP) and a second fluid (BP), comprising a plurality of thermal modules (15, 15a, 15b, 15c) respectively consisting of an upper plate (17) and a lower plate (19) assembled so as to define therebetween a first inner cavity (21) defining a first flow channel for the first fluid (HP) and at least one circulation space (33) defined between two successive thermal modules (15, 15a, 15b, 15c). The circulation space (33) includes so-called second fins (35) having a length (L_IFBP) of between 50 mm and 130 mm.
