Abstract (en)

[origin: WO2011094436A2] A disclosed example apparatus includes an interface (702, 726) to receive a request to access a memory (602a) of a memory module (600) and a data store status monitor (730) to determine a status of the memory. The example apparatus also includes a message output subsystem (732) to, when the memory is busy, respond to the request with a negative acknowledgement indicating that the request to access the memory is not grantable.
