Abstract (en)
[origin: WO2011088670A1] An interactive information system, an interactive information method, and a computer readable medium thereof are provided. The interactive information system comprises a reading apparatus, a first transmission interface, a processing unit, a second transmission interface, and an output apparatus. The interactive information system is adapted to use with a plurality of information gadgets. When an information gadget enters the reading range of the reading apparatus, the reading apparatus reads the information gadget, generates a signal related to the information gadget, and transmits the signal to the processing unit. Then, the processing unit identifies the information gadget indicated by the signal, retrieves a file according to the information gadget, and transmits the file to the output apparatus. Finally, the output apparatus then outputs the file received from the processing unit.
