Abstract (en)

[origin: WO2011092407A1] The harmonica according to the invention comprises: a main hollow body, the front surface of which is open so as to act as a bell while the opposite rear surface is bored with mouthpiece holes (200); a plurality of walls that define air flow channels (30, 31); and two blade holders (4, 5) on which a plurality of vibrating sound blades are mounted, wherein said sound blades are positioned in correlation with the above-mentioned air flow channels. Said harmonica is characterized in that it comprises an air distributor (6) enabling the selective supply of air from a single mouthpiece hole (200) to two air flow channels (30, 31) that are placed side by side.
