Abstract (en)

[origin: WO2011091819A1] The invention relates to a fastening element on a winding of a cast resin transformer for retaining a component. According to the invention, a retaining element can be connected directly to the winding of the cast resin transformer as part of the fastening element. A corresponding fixing element of the fastening element can be connected to the retaining element, wherein the fixing element has an accommodating element for retaining the component. Said invention results in the large advantage that the component no longer has to be connected to the yoke of the transformer core by means of additional supporting elements.
