Abstract (en)

[origin: WO2011092309A1] The invention relates to an antenna core (10), an antenna (30) comprising an antenna core (10), and to methods for producing an antenna core (10) and an antenna (30). The antenna core (10) used in each case consists of a continuous soft-magnetic strip (2) having a plurality of layers which are stacked one on top of the other and each of which is formed by a section of the strip (2). The layers are connected to one another by curved sections (23) of the strip (2) at end regions (11, 12) of the antenna core (10).
