Abstract (en)

The clamping device comprises a housing (1), which passes through two channels for accommodating laces (26,28). The channel is attached with movable clamping bolts, where the channel is formed, such that the cross section of the channel is reduced depending on the position of respective clamping bolts. The mutually connected clamping bolts have an operable lever, with which the clamping bolts are moved. The height of the channels between the clamping bolt and opposite walls of the channels is in a direction perpendicular to the direction of connection between the channels. An independent claim is included for a boot with a shaft.

Abstract (de)

Klemmvorrichtung zur lösbaren Fixierung von Schnürsenkeln (26, 28) mit einem Gehäuse (1) und zwei das Gehäuse (1) durchquerenden Kanälen (25, 27) zur Aufnahme jeweils eines Schnürsenkels (26, 28), wobei jedem Kanal (25, 27) ein in Richtung des Kanals verschiebbarer Klemmbolzen (41,43) zugeordnet ist und die Kanäle (25, 27) so ausgebildet sind, dass ihr Querschnitt in Abhängigkeit von der Position des jeweiligen Klemmbolzen (41, 43) verringert werden kann, um die in den Kanälen (25, 27) angeordneten Schnürsenkel (26, 28) festzuklemmen.
