Abstract (en)

The knife (1) has a convex bent cutting edge (2) whose distance is increased from a rotational axis (10) in progression direction of a contact region of the knife to a cutting material. The cutting edge is provided with a spiral-shaped outer circumferential contour. A cutting surface of front side (8) of the knife is arranged at cutting angle of 33 degrees to a main plane. A groove is arranged on the front side and radial-inwardly displaceable with respect to the cutting surface. The groove is extended along entire peripheral length of the cutting edge.

Abstract (de)

Um bei rotierenden Schneidmessern (1) mit spiraler Schneidkante (2) das Anhaften der abgetrennten Scheibe (20) am Messer (1) sowie deren Mitnahme zu verhindern, wird eine Kombination aus einem relativ großen Schneidwinkel (6) und einer radial innerhalb der Schneidfläche (5) liegenden Hohlkehle (7) in der Vorderseite (8) des Messers (1) vorgeschlagen.
