Abstract (en)

In a first step of the method a printed sheet of sulphate carton board is glued onto a cardboard plate made of sulphate, double wall or triple wall cardboard. The sheet is printed by means of a digital (personalised and/or versionalised) or offset (versionalised) printing process. After the sheet has been glued onto the plate (laminated) a section is punched out and provided with crease lines 7 to determine the width of the back 13 of the ring file folder. On either side of the back 13 there is present a front side 9 and a back side 11 of the ring file folder. After the punching operation the selected ring mechanism 17 is introduced and the ring file folder 15 is ready. The combination of process and selections of materials contributes to a socially well-considered manufactured product which can be completely recycled to its original raw materials. The user will always have the feeling of having a natural product in his possession.
