Abstract (en)
A cap (10) for container which comprises a cap body provided with a thread portion (12) at the inner peripheral surface of its upper portion which is engaged with a thread of an opening portion of a container, and a fixed portion connected with the cap body at a cuttable connector portion. The fixed portion comprises an upper ring (14), and a lower ring (16) provided with lock projections (20) to secure the lower portion to the opening portion of the container. The upper ring and the lower ring are connected at a connector portion (18). The lower ring is provided with at least one cutting line (43,44) extending from its bottom end to its upper end.
