Abstract (en)

[origin: EP2530042A1] The lift has a lift car (4) displaceable along a guide (2), and a cable (8) extending between the lift car and a ground station (1) of the guide. A portion of the cable is mounted in an area of the ground station in a cable tank (9). The cable is guided over a deflecting device i.e. deflection roller, of a cable car that is movable along the guide. The cable tank is displaceable and pivotable in direction vertically to a longitudinal axis of the guide. A cable holder is attached at the guide for adjustment of the cable between the cable tank and the cable car. Independent claims are also included for the following: (1) a method for mounting a lift (2) a method for demounting a lift.
