Abstract (en)

To provide a knitted fabric with a hole in which the knitting yarn is less likely to break. Stitches are knitted only for a hole forming portion so that a wale direction of a stitch row is folded back near a middle of the hole forming portion, and a hole (3) is formed while being sandwiched by the hole forming portion. A pickup stitch is formed while moving toward an exterior side of the knitted fabric of a side end portion (5) of the knitted fabric (1), the hole forming portion is knitted at the same position, and thereafter, it is folded back and returned to the original position while repeating the formation of the double stitches and the knitting by the movement toward an interior of the knitted fabric.
