Abstract (en)

[origin: EP2530227A1] The arrangement comprises two hinge elements, which are pivotally connected together. Two fastening units are arranged for fastening the hinge parts with two glass elements (1). The fastening units consist of two plate shaped parts (2,3), which are fastened to the corresponding glass element. The two plate-shaped parts enclose a cavity (9) into which the corresponding hinge element extends partially. A screw connection has two screws (4), which stretch parallel to the glass element and perpendicular to a hinge axis of the hinge through the cavity. An independent claim is included for a shower room with a glass wall element.
