Abstract (en)

[origin: EP2530380A1] The installation has a building outlet (3) with a sidewall strip (36) associated to a closure plate (37) with a central opening (38) allowing an end of a central tube (7) of a connecting conduit to pass through. An outer surface (8) of the tube is coated with an insulating material layer (13) e.g. rock wool. An inner face of the strip includes a connecting unit (40) to connect a peripheral tube (10) of the conduit. An upper end (41) of the peripheral tube is extended remotely from a bottom face of the plate. An opening (42) in the strip assures new air inlet into volume delimited by the strip.
