Abstract (en)

[origin: EP2530915A2] A method for locking a mobile phone keyboard and a mobile phone are disclosed in embodiments of the present invention. The method ensures that a mobile phone keyboard is not locked before a mobile phone is put into a pocket, while the mobile phone keyboard is automatically locked after the mobile phone is put into the pocket, thereby ensuring that a user can lock the mobile phone keyboard in time without affecting normal use of the mobile phone. The method includes: disposing light sensing keys on a mobile phone, reporting key times when the light sensing keys are blocked, judging whether the light sensing keys are all pressed, and if yes, locking the mobile phone keyboard.
