Abstract (en)

[origin: WO2011095507A1] The invention relates to a device for opening and closing the at least two sliding doors (3, 3') of a cabinet, wherein the sliding doors (3, 3') are movably fastened to a body (1) of the cabinet by means of sliding parts (9, 10, 9', 10'), having a drive device (5, 6, 7) that can be fastened to the body (1) in order to displace a drive part (8, 8') that can be fastened to the sliding door (3, 3') between two end positions by the force of a motor (13), in particular an electric motor. According to the invention, the drive device comprises two housing parts (11, 11') connected to each other in the displacement direction of the sliding doors (3, 3') for moving relative to each other.
