Abstract (en)

[origin: WO2011092116A1] The invention relates to a refrigeration device for a combination refrigerating appliance such as a household refrigerator-freezer combination, comprising a condenser (8) and at least two evaporators (3, 4) which are connected in parallel circuitry to an electrically controlled, multistable selector valve (7) and can be selectively supplied with coolant via the selector valve (7). According to the invention, a series circuit of a first current-controlled switch (18; 19) having PTC resistor characteristics and of the selector valve (7) is connected electrically parallel to the condenser (8).
