Abstract (en)

[origin: WO2011096859A1] The present invention relates to a method to monitor network performance in a computer (40) comprising at least one physical server (10) having a hardware machine (12) attached via a hypervisor (14) to a set of virtual machines (15,16,17). The method comprises steps like: Measuring network performance parameters for selected packet flows (21,22,23) in transition between the hardware machine and the virtual machines. Analyzing (59) the measured performance parameters. - Identifying a source of network degradation.
