Abstract (en)  
The opening mechanism (16) includes a fixing member (18), a movable member (20), a locking member (22), a first resilient member (24) and a second resilient member (26). The fixing member (18) is fixed to a first rail (10) and has a guide portion (28), a stop (30) and a room (32). The movable member (20) is movably connected to the fixing member (18) and has a first leg (38), a second leg (40) and an engaging portion (44). The first leg (38) slidably contacts the guide portion (28) and the second leg (40) extends into the room (32). The locking member (22) is pivotably connected to a second rail (12) and includes a locking portion (54). The first and second resilient members (24, 26) respectively provide a force to a third rail (14) and the movable member (20). When the second rail (12) is forcibly pulled out relative to the first rail (10), the movable member (20) is moved and pivots an angle so that the locking portion (22) is disengaged from the engaging portion (44).
