Abstract (en)  
[origin: EP2532442A1] The bottle has a sampling device (3) comprising a supplying unit with conditioned product and an upstream orifice (6a) arranged in a reservoir (2). The reservoir includes air depression formed to carry out filling of the reservoir with the product. An envelope (23) is mounted in the reservoir to compartmentalize the reservoir into an internal space (2a). The upstream orifice is formed on an external space (2b). A filling valve (13) comprises a breaking unit for breaking the envelope during the filling of the reservoir to made communication between the external and internal spaces.
