Abstract (en)
[origin: EP2532513A2] The film-bag (10) has a closure tab (12) i.e. wrapping tab, comprising outer- and inner layers and formed in extension of a pocket rear wall (16) by folding a tab extension against an inner side under formation of the inner layer. The layers are connected by lateral tab-seams (25, 26) and a tie-in weld (27), which is transversely directed to the tab-seams and arranged at a free-edge of the inner layer. The tie-in weld and the connection of layers are formed as a hot-melt connection. An intermediate seam (31) is arranged between the layers in a region of a relief opening or a relief slot (32). The intermediate seam is made of hot melt material. Independent claims are also included for the following: (1) a method for manufacturing a bag from a film (2) a device for manufacturing a bag from a film.
