Abstract (en)

[origin: DE102011050923B3] The dryer has a drum with door which is arranged in a housing, and a heating unit for generating processing air flowing over heat exchanger. A condensate pump pumps the condensate obtained from drying process, into condensate collecting container or over the rear wall of housing. A coil section for providing condensate line at rear wall (10) of housing, comprises plastic mold portions (14,15), where the plastic mold portion (15) comprises releasable portion of coil used as support (16) for free end (17) of condensate line to external wastewater outlet.
