Abstract (en)

[origin: EP2532789A1] The container assembly has containers (10) of a fabric or film, having fillable bag (12) and connection element (14) for connecting the adjacent containers. The connecting element has a U-shaped fabric or foil extension into which the bag of the second container is insertable and is connectable by fastener (18). The fastener enables spaced connection of the second container in a longitudinal direction of the extension, so that an intermediate zone is formed between containers. An independent claim is included for method of filling container assembly.
